## Stealth Cell towers and the 2004 U.S. Presidential Elections

source: by Bruce Conway <http://www.lightwatcher.com>

Late last fall, I watched bemused as several plainclothes geeks installed a cell tower behind our N.W. Island's Masonic Hall. It went up quickly, and without any fanfare.

The twist was that the cell tower was disguised as an ordinary flagpole. This was patriotic, and very suspicious. The camouflaged stealth tower was erected without any protests, warnings or announcements to local businesses or residents.

Being a curious person I investigated, and discovered to my great surprise that "stealth towers" are being hastily erected throughout the country, by the thousands. Camouflaged microwave and cell phone towers are being disguised as cacti, palm trees, church crosses, rock formations, water towers, and pine trees. This is happening without any of the dissent or protest usually surrounding cell tower erections.

Companies like Stealth Concealment Solutions of Charleston, S.C., are doing a brisk business. They custom-disguise cell towers to blend into their surroundings. It is estimated that up to 30% of the new cell tower erections now going up are being stealthily concealed.

When one considers the rapid advancements in electromagnetic and psychotronic mind control technology, this trend in utility concealment is rather sinister. If researchers could successfully project human speech into the minds of the deaf, as Dr. Joseph C. Sharp of the Walter Reed Army Institute of Research did in 1974, think of their present capabilities.

Consider this quote by a pioneer in electromagnetic mind control: "Man does not have the right to develop his own mind. This kind of liberal orientation has great appeal. We must electrically control the brain. **Some day armies and generals will be controlled by electric stimulation of the brain.**" - Dr. Jose Delgado -1974 Congressional Record, No. 262E, Vol. 118.

Here is another eye-opening quotation: "Contemporary neuroscience suggests the existence of fundamental algorithms by which all sensory transduction is translated into the intrinsic, brain-specific code. Direct stimulation of these codes within the human temporal or limbic cortices by applied electromagnetic patterns may require energy levels which are **within the range of both geomagnetic activity and contemporary communication networks.** A process which is coupled to the narrow band of brain temperature could allow all of Directly accessing every human brain by electromagnetic induction of fundamental algorithms - by M.A. Persinger, Laurentian University / Perceptual and Motor Skills, June 1995, 80, 791-799.

And now, one final quotation to put the issue of stealth cell towers into a proper political perspective: "As an expert and juridical personality I declare: In Kiev was launched a mass production of Psychotronical Biogenerators and their tests. I cannot assert that **during the coup d'etat were used exactly the Kiev generators.** All the same the fact that they were used is evident to me. What are the Psychotronical generators? **They are electrical equipment which produces the effect of guided control in human organisms.** It affects especially the left and right hemisphere of the cortex. **This is also the technology of the U.S. project Zombie 5 . . .** I draw on my personal experience since I am myself the designer of such a generator." Quote by Victor Sedleckij, the Vice President of the League of Independent Soviet Scientists / Komsomolskaya Pravda / August 27, 1991

With the U.S. Presidential election coming up in a few short months, it is likely that the stealth cell tower network being rapidly constructed is destined to play an important role in remotely influencing the perceptions, thoughts and decisions of American voters.

Is there any crime that the Neoconmen won't perpetrate to retain their strangle-hold on power?
